PLAMEDI MAYALA

Software developer.
I build, fix, monitor and analyse the systems people rely on.

Based in
Kigali, Rwanda

01 Profile

Software developer with hands-on experience in IT support and platform operations. I build systems, keep an eye on how they perform, fix what breaks and look at the data to see what can be improved.

I track uptime and error rates, handle incidents through to the **root cause**, and turn data into clear reports. I keep infrastructure in code and ship through reviewed pipelines. I work well with both technical teams and non-technical users, and I'm most useful in practical roles where **day-to-day reliability matters**.

02 Experience

Mobility, fintech and career tech. Products used by drivers, operators, savings groups and job seekers.

Jun 2026 – now
Kigali

Creative Director / 4PM Digital Agency Ltd

Digital agency building websites, apps and brands for businesses.

- Set the creative direction and lead product design and UI/UX for client websites, apps and brands, from first concept to launch.
- Scope each project with the client and run delivery with clear project management, leading the agency's developers and specialists.
- Plan the solution architecture for client builds and ship them to AWS through GitHub Actions pipelines, on Dockerised Linux servers behind Nginx with monitoring in place.

Dec 2024 – Jun 2026
Kigali

IT Officer / EVPlugin E-Mobility Rwanda

Charging management platform serving drivers, station operators and site owners.

- Kept the platform healthy for 50+ stations and about 8,000 sessions a month with Grafana and Prometheus alerts on availability, failed sessions and payment errors; led incident response through to root cause and wrote the runbooks.
- Ran the Dockerised services on Linux and AWS, with infrastructure in Terraform, IAM access controls, secrets management and backups proven by test restores.
- Handled integration with chargers over OCPP and roaming partners over OCPI, and troubleshot GSM connectivity on station modems and mobile devices.
- Reconciled charging transactions against Mobile Money and VAS payments in SQL (PostgreSQL, MySQL) and chased every mismatch until the books closed.
- Tested releases in staging before they reached live chargers, fixed defects, supported drivers and operators, and trained station staff.

Jan 2025 – Jan 2026
Kigali · part-time

Co-founder & Software Developer / Aplini

Career platform for job discovery and applications. Grew to about 1,200 beta users.

- Built the product with Next.js, Node.js and Supabase, including semantic job matching on OpenAI embeddings and pgvector, so people see roles that fit their skills, not only their keywords.
- Protected user data with SSO (OAuth 2.0), row-level access controls and encryption, and assessed the vendor risk of depending on third-party AI APIs.
- Set up code review, CI/CD on GitHub Actions, Sentry monitoring and separate development, staging and production environments.
- Led product priorities using SQL dashboards for sign-ups, activation and matches, combined with analysis of user feedback.

02 Experience

Continued.

Dec 2024 – Dec 2025
Kigali

Product Designer & Developer / S.U.L E-Mobility

- Designed and shipped the customer web app in Next.js and TypeScript on a reusable design system, shaped by user interviews and usability testing.
- Built REST API integrations with the backend and payment providers, deployed with Docker and GitHub Actions.
- Shot the photos and video for targeted campaigns that brought the company its first qualified leads.

02 Earlier roles

2024 – 2025	**UI/UX Designer** GURARIDE Rwanda	Designed the mobile app in Figma, from flows to UI, tested it with riders and helped the developers with code (Java, XML layouts) when needed.
Sep – Dec 2024	**Frontend Developer** Agrisense Technologies	React interfaces for machine-learning crop and soil advice on Python and Django REST APIs, built light for low-bandwidth use.
Sep – Oct 2024	**UI/UX Designer, intern** ThinkGreen Afrika	User research, wireframes, Figma prototypes and usability testing.
2020 – May 2023	**Multimedia & IT, independent** Rwanda	10+ projects for businesses and NGOs: PHP websites on MySQL and Microsoft SQL Server, IT support and troubleshooting, identities, photo and video.

03 Toolkit

Infrastructure and operations first, then the product and people skills around them.

Cloud & IaC	**AWS** (EC2, S3, RDS, VPC, IAM, CloudWatch) · **Terraform** · Docker, Kubernetes · Linux, Nginx · reproducible dev, staging and production
CI/CD	GitHub Actions · reviewed pipelines, no hand deploys · automated tests, builds and releases · Git workflows
Observability	Grafana, Prometheus, Sentry, CloudWatch · uptime, error-rate and latency alerts that reach a person · incident response, runbooks, root-cause analysis
Reliability	Backups with tested restores · disaster recovery and business continuity · cost tracking by environment and service · performance monitoring
Security & privacy	Identity and access control, SSO (OAuth 2.0, OIDC, SAML) · encryption in transit and at rest · secrets management · vulnerability management · de-identification and pseudonymous IDs · data sovereignty · vendor and third-party API risk
Architecture	Solution architecture · multi-tenant platforms · offline-first and low-bandwidth design · systems integration, REST APIs, XML · LMS and edtech platforms
AI	OpenAI APIs, embeddings, pgvector semantic search · AI-powered tools and frameworks in daily work
Programming	TypeScript, JavaScript, Python, Java, PHP, SQL · React, Next.js, Node.js, Express, Django
Databases	PostgreSQL, MySQL, Microsoft SQL Server, Oracle, Supabase, MongoDB, Redis
Telecoms	Telecommunications, GSM, roaming (incl. OCPI), VAS · Mobile Money and card payments, reconciliation, RRA EBM e-invoicing · mobile devices
Design	Product design, UI/UX · Figma, Framer · user interviews, usability testing, prototyping, design systems · Photoshop, Illustrator, Premiere Pro, After Effects, DaVinci Resolve
Ways of working	Leadership, project management, creative problem solving, analysis, troubleshooting, customer service · explaining technical needs to non-technical staff · Microsoft Office

04 Selected work

Three products I designed and built, each with real rules about money or trust.

EV CHARGING · 2026

NEXUSCHARGE

Runs a charging business end to end.

Chargers connect over OCPP 1.6 to 2.1. Drivers pay after charging by MoMo, Airtel Money or card and get a receipt signed by the RRA EBM. Every franc is reconciled against provider settlements.

Console, driver app and public site on one Node.js server. **OCPI roaming**, offline-first.

charge.demo.nexuscharge.rw ↗

FINTECH · SAVINGS GROUPS

IKIBINA

Replaces the notebook and the WhatsApp thread.

Savings groups record contributions, loans, fines and payouts in one place. Every balance comes from a double-entry ledger, so anyone in the group can trace it.

Next.js, TypeScript, PostgreSQL. **100+ unit tests** on the money logic. Three languages.

kibina.rw ↗

CAPSTONE · TRANSPORT

BYABONEKA+

Lost and found for Kigali's buses and motos.

Matches lost and found reports, checks ownership with challenge questions, flags suspicious claims and confirms each handover with a one-time code.

Five-day pilot, 12 users from KBS and Royal Express: **SUS 78.5**, **87%** match accuracy, **83%** of claims ended in a return.

byaboneka-plus.vercel.app ↗

05 Education & certifications

BSc (Hons) Software Engineering

African Leadership University, Kigali · 2023 – 2026
Second Class Honours, Upper Division · CGPA 4.32 / 5
Capstone: Byaboneka+ (field pilot)

A-Level: Mathematics, Physics & Computer Science

École des Sciences Byimana · 2019 – 2022 · 55 / 60

ITIL 4 Foundation	in progress, Dec 2026
Grafana Fundamentals	Grafana Labs, 2025
Kubernetes Pod Management	Coursera, 2025
GitHub Actions	Duke University
APIs	Meta
Volunteer Certificate	Rwanda Red Cross

06 Languages

My products ship in the languages I speak.

LANGUAGE	LEVEL	SPEAKING	WRITING	READING	USED FOR
English	C1	■■■■■	■■■■■	■■■■■	Working language for code, documentation and clients
French	C1	■■■■■	■■■■■	■■■■■	Client work, product copy, translation
Kinyarwanda	C1	■■■■■	■■■■■	■■■■■	Daily life, user interviews, field pilots
Sign language	C1	■■■■■	—	—	Signed conversation (speaking = signing)

Level on the CEFR scale (A1 beginner – C2 mastery). Dots: 5 = fluent, 1 = basic.
